

Screening & Recycling

A Screening Bucket with all the functionality of a digging bucket in one easy-to-use excavator attachment.

Increases the speed of on-site dig-screen-back fill operations leading to reduced material handling costs and logistics.

- Increases the speed of on-site dig-screen-back fill operations leading to reduced material handling costs and logistics
- Complete with high torque high speed hydraulic motors for optimal material processing
- Ramp in and ramp out hydraulic operation will increase the life of both excavator and Screener
- Wear Blocks & Hammers use CAT J system giving increased machine standardisation and inventory cost savings
- All teeth compatible with the CAT tip and adapter system giving increased machine standardisation and inventory cost savings
- Bi-directional rotor system reducing the build up of material and eliminating blockages
- A fully serviceable modular design enabling on site maintenance
- All consumable parts are replaceable on site increasing return on investment
- Central greasing points for fast and easy maintenance
- Rotor system safety guard for added protection

Sizes available to fit excavators ranging from 12 to > 35 tonnes.
